PROFESSIONAL SUMMARY

Full Stack Software Developer specializing in scalable web development, backend architecture, and database-driven applications. Experienced in building and deploying web applications, working with modern JavaScript frameworks, and managing relational databases. Focused on writing maintainable code, improving user experience, and delivering practical software solutions.

EDUCATION

Dr. A.P.J. Abdul Kalam Technical University | Ghaziabad, Uttar Pradesh
Bachelor of Technology in Computer Science and Engineering | 2023–2027
SGPA: 7.8 / 10

EXPERIENCE

Software Developer — CodesWords

- Contribute to the development and maintenance of web application features using JavaScript and modern frontend technologies.
- Work with frontend components and backend functionality to support application workflows and improve usability.
- Collaborate on debugging, testing, and refining features to help maintain reliable, maintainable code.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C++, SQL, HTML5, CSS3
Frameworks & Libraries: React, Next.js, Node.js, Express, Tailwind CSS
Databases: MongoDB, MySQL, PostgreSQL
Tools & Platforms: Git, GitHub, Render, Vercel, Docker

PROJECTS

Queueless – Digital Token and Management System | Live App | GitHub

- Developed a web-based digital token and queue management system to organize service queues through a digital workflow.
- Helps replace manual token handling with a more structured approach to queue and service management.
- Uses Next.js for the web application and PostgreSQL for storing and managing application data.

SHADO – Real-Time Chat Application | Live App | GitHub

- Built a real-time messaging app with private chats, online status, and message delivery/read indicators.
- Implemented disappearing messages and authentication, with a responsive interface and light/dark themes.
- Developed with React, Node.js, Express, Socket.IO, PostgreSQL, and Prisma.

DATA STRUCTURES & ALGORITHMS

Solved 140+ LeetCode problems across Arrays, Strings, Linked Lists, Two Pointers, Stacks & Queues, and Binary Search.

ACHIEVEMENTS & COURSEWORK

Live Projects: Queueless and SHADO — deployed web applications.
Relevant Coursework: Operating Systems (OS), Object-Oriented Programming (OOPs), Data Structures & Algorithms (DSA), Database Management Systems (DBMS), Computer Networks (CN).
